

SEMINAR 3: 30 HOURS

TOPICS: INTERFERENCE FIELDS AND TEETH IN DIAGNOSIS AND TREATMENT

Since 2018, this has been the joint education curriculum of IFMANT, SANTH, IGNH, ÖNR, and BNR, among others.

No	Topic	Theory	Practical
A. CORE TOPICS			
<i>Anatomy, physiology, pathology, terminology, materials science (the amalgam problem), radiology (single OPT image), interference fields in the dental/jaw region, test options, demonstration of structures on the panoramic dental X-ray, hazards, joint evaluation of OPT images (participants may bring their own records). Information on digital volume tomography.</i>			
1	Explanation of the interference field	2	
2	Scientific foundations of the interference field	1	
3	History-taking, clinical examination, and documentation	1	
4	Typical interference field disorders and special examples	2	
5	Interference field tests and rules	1	
B. SPECIAL SECTION			
6	Interference fields and acute and chronic diseases	1	
7	Risks in interference field therapy and approach to the patient	1	
8	Interference field testing and phenomena: the seconds phenomenon, delayed seconds phenomenon, incomplete seconds phenomenon; interaction between different interference fields; interference fields due to blockage of the ground regulation system; interference field / segment connections	1	1
9	Diagnosis of joint disorders and local, segmental, and intra-articular injections; TMJ dysfunction; relationship to ENT and eye diseases	2	1
10	Approach in interference field therapy	1	1
11	Segmental applications for internal organs	1	
C. SUPPORTIVE EDUCATION			
12	Definition of the dental-jaw complex and its importance for the body	2	
13	The importance of diagnosing and treating the dental-jaw complex from the Neural Therapy perspective	4	2
14	Panoramic evaluation of teeth as interference fields and examination of Adler-Langer points	2	2
15	The adverse effects of gut flora imbalance, heavy metals, and electromagnetic loads on the organism, and their elimination	2	
16	Assessment and questions		
Total duration of Seminar III		24	6

D. TEACHING MATERIALS AND RESOURCES

Recommended resources for high-quality education:

- 1 Prof. Dr. Hüseyin Nazlıkul, Neural Therapy – Neurophysiology, Ground System, Interference Fields, Autonomic Nervous System, Injection Techniques and Treatment Recommendations, Nobel Medical Bookstores, 2nd Edition, Istanbul 2015
- 2 Prof. Dr. Lorenz Fischer, Neural Therapy – Neurophysiology, Injection Techniques and Treatment Recommendations, Translated by: Prof. Dr. Hüseyin Nazlıkul & Prof. Dr. Yusuf Tamam.
- 3 Prof. Dr. Hans Barop, Neural Therapy Pocket Atlas, Translated by: Prof. Dr. Hüseyin Nazlıkul
- 4 James W. McNabb, Practical Guide to Joint and Soft Tissue Injections, Translated by: Prof. Dr. Hüseyin Nazlıkul & Prof. Dr. Yusuf Tamam, Kongre Kitabevi, 2018 Antalya

Neural Therapy is a comprehensive, high-quality course of education covering neurophysiology, the ground system, interference fields, the autonomic nervous system, injection techniques, and treatment recommendations. No teaching materials are provided for the seminars and lectures. For the full depth of the curriculum, the books by H. Nazlıkul, L. Fischer,

and Hans Barop cover this material. The complete set of these books can be obtained from the BNR association.
